Report on studies at Leyden, Holland, on a Fellowship from the  
National Education Board.

I was at Leyden during the period September - November 1924,  
where I was occupied especially with studies on theoretical physics with  
Professor Ehrenfest, without, however, neglecting minute study of the  
criogenic laboratory facilities.

My scientific work during this period is attested by an article  
on the contact between atoms and electrically charged particles, published  
in the Zeitschrift für Physik (vol.29,1924).

An article on the relations of intensity between the components  
of a multiple series, and another on the ionization of hydrogen atoms by  
contact with slow hydrogen atoms, will presently appear in the acts of  
the Royal Accademia dei Lincei.

Rome, December 24, 1924.
