COMMENTS:

In general agreement with  
attached memo of G.G. (1/7/47)

AG's memo does not explicitly mention that human genetics,  
sex physiology, & endocrinology are all explicitly in MS. Thus  
MS interest in population problems is restricted to the static social,  
mathematical, aspects; and to the quantitative ecology and  
"theoretical biology" which forms a background. W.W.

JUL 8 1947

SUBJECT:

Is any aspect of the appended population problem (i.e., the percentage of  
our population that is feeble minded, and their continued tendency to breed) a concern  
of Rockefeller Foundation? If so, is it MS, IHD, <sup>NS</sup> or SS? I suspect all are interested  
in one way or another.

Or are even the nonpropaganda aspects of this issue too hot a potato for  
RF to handle? I feel sure the problem must have been given attention in the past, and  
some decision of policy made, of which I am unaware.

JHW

pf

AG's memo is thoughtful &  
provocative. Shouldn't we  
do something about it?
